Name: P.F.

Date: 5/1/2007

ATM

Patient History: Mr. PF is a 51 yo male who presented with paraplegia s/p 26 years secondary to Adreno-Myleo-Neuropathy. His history also included Addison's disease and ADHD. He also presented with abnormal tone in the lower extremities, hyperactive reflexes, clonus, and balance issues. The ATM 2 was incorporated into his Integrative Manual Therapy treatment. Computerized foot-plates for immediate feed-back on balance and weight shift capabilities were utilized in the above ATM 2 treatment session. After the above treatment session, Mr. PF utilized a walker and knee immobilizers and took his first active steps in 26 years.
